

Reflection

I decided to implement the changes that were suggested in my Scanner.py file. I printed the tokens out into correct syntax and I unflagged some characters in the alphabet so that they pass and can be tokenized.

- Input & Output Format: .3/.5 – Output did not follow proper syntax
- Lexical Error: .5/1 – The main problem is that you flagged some characters in the alphabet as lexical error; it's likely to be caused by some restrictions you introduced.

```
How many files are there? 4
File: test1.txt
<BOOLEAN,true>
<[>
<NUMBER,45>
<STRING,hi 68+>
<]>
<[>
<{>
<}>
<}>
<NUMBER,34>
<NUMBER,-2>
<STRING,hello>
<:>
<STRING,byee>
<[>
<[>
<STRING,hi>
```
